Summary

Full-stack developer working across React, TypeScript, and Node.js, eager to learn complex backend systems and grow into designing and managing large-scale applications

Education

P.P. Savani University (PPSU), Surat Surat, Gujarat
B.Tech in Computer Science & Engineering July 2021 – May 2025
CGPA: 8.26

Experience

IT Idol Technologies Valsad, Gujarat
Software Development Engineer Jan 2025 – Present

- **Endlink — Frontend Engineer**
  - Built a multi-tenant secure messaging web app (React, Redux, Firebase) that lets hospital organizations onboard onto the platform with their own branding, and supports distinct onboarding flows for patients, caregivers, and coworkers.
  - Designed automated thread-routing logic tied to on-call schedules: patient conversation threads auto-assign to the on-call doctor when a shift starts, return to unassigned when it ends, and move to a resolved queue once closed.
  - Implemented group and messaging architecture (agent, on-call, and regular groups) with priority/todo filters so clinical staff can quickly surface urgent patient messages.
  - Modeled caregiver-patient account relationships (e.g., a minor patient managed by a parent/guardian account) to support delegated, role-based access across user types.

  Tech Stack: React, Redux, Firebase
- **Hope For Everybody (HFE) — Frontend Engineer**
  - Built frontend features with React, Redux Toolkit, Axios, and TanStack Query for efficient, cached data fetching from the backend, improving UI responsiveness.
  - Implemented WebSocket-based real-time notifications on the frontend, so users get instant updates without polling.
  - Improved UI and accessibility to help users discover community programs and support services more easily.

  Tech Stack: React, TypeScript, Redux Toolkit, TanStack Query, WebSocket

Personal Projects

- **Appointment Booking System — Backend Development**
  - Built a REST API for appointment scheduling with layered architecture (controllers, services, repository) using Bun, Express, TypeScript, and Prisma with PostgreSQL.
  - Implemented JWT authentication with token blacklisting on logout and role-based access control for USER and SERVICE_PROVIDER roles.
  - Designed dynamic time-slot generation from provider-defined weekly availability, using database-level constraints to prevent double-booking.

  - Added a scheduled cron job to purge expired blacklisted tokens daily.

  Technologies: Bun, Express.js, TypeScript, PostgreSQL, Prisma, JWT, Zod
  github.com/KirtanGondaliya/Appointment-Booking-System-Backend
- **Course Selling Platform — Backend Development**
  - Built a REST API for an online course marketplace using Bun, Express, TypeScript, and Prisma with PostgreSQL.
  - Implemented JWT authentication and role-based access control for INSTRUCTOR and STUDENT roles, including course/lesson management and a purchase system with purchase history.
  - Added paginated course listings and standardized error handling across all endpoints.

  Technologies: Bun, Express.js, TypeScript, PostgreSQL, Prisma, JWT, Zod

Technical Skills

- **Programming Languages:** C++, JavaScript, TypeScript
- **Frontend Development:** HTML, CSS, Tailwind CSS, React.js, Redux Toolkit, TanStack Query
- **Backend Development:** Node.js, Bun, Express.js, REST APIs, Prisma, JWT, Zod
- **Databases:** PostgreSQL, MySQL, MongoDB,
- **Version Control:** Git, GitHub, Bitbucket
